LEAD CONTROL NUMBER 13709

The following investigation was conducted on November 25, 1995, by Special Agent PETRA M. BUTLER at Oklahoma City, Oklahoma.

Attempts were made to review exhibits Q9 and Q10 without success. Due to the video cassette tapes being recorded in the PAL (phase alternation line) standard, they can not be viewed with conventional means. However, six copies of each tape were converted to the NTSC standard and are in the possession of the Washington Metropolitan Field Office.
